

Thayagapriyan Dravidamani

SYSTEMS INTEGRATION LEAD · 10+ years enterprise integration

thayagapriyand@gmail.com linkedin.com/in/thayagapriyan github.com/thayagapriyan

TECHNICAL SKILLS

Platforms	Anypoint Platform (CloudHub 1.0/2.0, RTF, Hybrid), Anypoint MQ, ActiveMQ, RabbitMQ, Kafka (AWS MSK)
Architecture	API-led Connectivity , Event-Driven Architecture, Pub/Sub, Canonical Data Modeling, Microservices
Development	Mule 3 & 4 , DataWeave , Core Java, Spring Boot, TypeScript, Groovy, XSLT, XPath
Cloud & DevOps	AWS (S3, SES, MSK), GCP BigQuery, GitHub Actions, Jenkins, Bamboo, Nexus, Docker
APIs & Protocols	REST, SOAP, HTTP/S, FTP/S, SFTP, SMTP, AMQP, JWT, OAuth 2.0, TLS/mTLS, JSON, XML
Security	OAuth 2.0 / JWT , AWS Signature V4 , Salesforce JWT (RSA), TLS, API Policies & Governance
Databases	MySQL, DB2, Microsoft SQL, Azure DB, H2, Derby
Systems	Salesforce , SAP S4/HANA (SOAP/OData), Hybris, JPMC Payment Services, AS400, 11Ants Analytics

PROFESSIONAL EXPERIENCE

Systems Integration Lead

Apr 2021 – Present

LTM • USA

Leading integration architecture and delivery for enterprise programs spanning Salesforce, SAP S4/HANA, e-commerce, and developer platform initiatives.

API DEVELOPER EXPERIENCE & GOVERNANCE

- Architected a **centralized API catalog** integrating MuleSoft API Exchange with a Salesforce Experience Site, exposing interactive Swagger/OpenAPI docs via a custom Lightning Web Component which improved developer self-service and reduced API onboarding time.
- Configured dedicated subdomain and email services for the API portal, establishing a developer engagement platform aligned with enterprise governance standards.
- Published and customized the **API Experience Hub** portal, defining the organization-wide API discoverability and documentation standard.

SAP S4/HANA MIGRATION – MAT PROGRAM

- Designed and delivered the integration layer that migrated a strategic accounts platform from a legacy on-premise system to **SAP S4/HANA**, extracting data from TRAX, transforming it into a **canonical data model**, and publishing it through OData and SOAP services.
- Deployed all APIs to **Runtime Fabric** and established Anypoint Monitoring dashboards for real-time SLA visibility and operational governance.

E-COMMERCE INTEGRATION – SALESFORCE & HYBRIS

- Built a full suite of Mule 4 commerce APIs connecting Salesforce and Hybris — Create/Update/Get Cart, Delivery Options, Promotions, Create & Publish Order — enabling end-to-end **order lifecycle orchestration**.
- Implemented Anypoint MQ for asynchronous decoupling between commerce events, with Salesforce Apex callbacks integrated inside the API layer.

PLATFORM ENGINEERING & INNOVATION

- Engineered **AWS Signature V4** signing logic to authenticate against the AWS SES API, establishing the reusable security pattern for all AWS service integrations.
- Implemented **Salesforce JWT authentication** with RSA key pairs, replacing fragile credential-based auth and setting the enterprise standard for Salesforce connectivity.
- Resolved a critical pipeline constraint by implementing **streaming for payloads above 10 MB over Kafka** within Mule, which enabled high-volume file delivery without timeouts.
- Automated Flex Gateway API deployments via **GitHub Actions**, eliminating manual steps and bringing gateway management under infrastructure-as-code.
- Built **XML SDK and Java SDK custom connectors** for centralized logging and transaction tracking, deployed platform-wide for audit and observability.
- Led the **Java 17 runtime migration** across Mule applications — identified compatibility issues, authored the migration runbook, and coordinated remediation across teams.
- Integrated a Jira connector for automated ticket creation on failed transactions, **reducing MTTR** by removing manual incident logging.
- Designed and deployed a **Spring Boot / Kafka consumer microservice** for real-time invoice status processing, validating event schema and persisting to MySQL.
- Architected a **TypeScript / Hono loyalty gateway** exposing five loyalty operations to backend Spring Boot services.
- Configured Microsoft Outlook 365 via Graph API for LOB notification workflows; connected AWS SES for customer-facing email delivery.
- Migrated legacy DataMapper (.grf) transformations to **DataWeave**, modernizing the codebase for Mule 4 compatibility.

Delivered integration solutions for warranty, insurance, and financial services clients; progressed from developer to technical lead within the engagement.

ENTERPRISE WARRANTY INTEGRATION

- Designed a **contract-first SOAP integration** aggregating dealer product data from Salesforce and pricing from Big Machines, writing contracts back into SFDC with mandatory field validation and custom exception handling.
- Built a **dynamic PDF generation service**: retrieving Salesforce templates, querying Azure DB via optimized stored procedures, generating and merging four distinct PDFs, and persisting all payloads through a logging interceptor for audit compliance.
- Implemented an **asynchronous contract pipeline** using ActiveMQ — acknowledging customers immediately, then processing orders in the background to decouple client-facing latency from backend processing.

FINANCIAL SERVICES INTEGRATION – JPMC

- Built an integration to **JPMC payment web services** for authorization lifecycle management — create, inquiry and delete operations with error handling and security controls.

Built foundational integration expertise across retail, mobility, and loyalty programs; pioneered API-led connectivity adoption within the account.

MOBILE COMMERCE PLATFORM

- Implemented a full **API-led Connectivity architecture** (Experience / Process / System layers) routing all mobile app traffic through Mule — one of the earliest API-led implementations in the account, and the reference pattern for later projects.
- Configured Jenkins CI/CD pipelines and Bitbucket repositories, embedding automated build and deployment into the team's delivery workflow.

RETAIL & SUPPLY CHAIN

- Built the Supplier Portal integration: an automated **Hybris-to-AS400** product pipeline via Amazon S3 with Quartz-scheduled Mule pickup, reducing manual supplier data entry.
- Developed the ANT Analytics pipeline — queue-driven S3 extraction, business-rule transformation, and automated delivery to the 11Ants Analytics system.
- Implemented a **Loyalty Program API** integrating Hybris with the Airpoints NZ backend, validating Airpoints numbers and normalizing responses for Hybris consumption.
- Built FTP/SFTP transfer automation with Quartz scheduling for cross-system file exchange, and a Java/JQL Jira tool for dynamic effort reporting.

KEY TECHNICAL ACHIEVEMENTS

- | | |
|---|--|
| ● Architected 10MB+ Kafka streaming in Mule for high-volume data pipelines | ● Implemented AWS Sig V4 & Salesforce JWT — reusable security patterns across the platform |
| ● Automated Flex Gateway deployments via GitHub Actions as infrastructure-as-code | ● Built custom XML & Java SDK connectors for platform-wide audit and observability |
| ● Led Java 17 migration across Mule apps with a compatibility assessment playbook | ● Reduced MTTR with Jira-integrated automated incident creation |
| ● Delivered SAP S4/HANA migration integration on a canonical data model | ● Published the self-service API Experience Hub improving developer onboarding |
