Thayagapriyan Dravidamani

SYSTEMS INTEGRATION LEAD · 10+ years enterprise integration

thayagapriyand@gmail.com linkedin.com/in/thayagapriyan github.com/thayagapriyan

TECHNICAL SKILLS

Platforms	**Anypoint Platform** (CloudHub 1.0/2.0, RTF, Hybrid), Anypoint MQ, ActiveMQ, RabbitMQ, **Kafka** (AWS MSK)
Architecture	**API-led Connectivity**, Event-Driven Architecture, Pub/Sub, Canonical Data Modeling, Microservices
Development	**Mule 3 & 4**, **DataWeave**, Core Java, Spring Boot, TypeScript, Groovy, XSLT, XPath
Cloud & DevOps	**AWS** (Lambda, API Gateway, IAM, VPC, Security Groups, S3, SES, MSK), GCP BigQuery, GitHub Actions, Jenkins, Bamboo, Nexus, Docker
APIs & Protocols	REST, SOAP, HTTP/S, FTP/S, SFTP, SMTP, AMQP, JWT, OAuth 2.0, TLS/mTLS, JSON, XML
Security	**OAuth 2.0 / JWT**, **AWS Signature V4**, Salesforce JWT (RSA), TLS, API Policies & Governance
Databases	MySQL, DB2, Microsoft SQL, Azure DB, H2, Derby
Systems	**Salesforce**, **SAP S4/HANA** (SOAP/OData), Hybris, JPMC Payment Services, AS400, 11Ants Analytics

PROFESSIONAL EXPERIENCE

Systems Integration Lead

Apr 2021 – Present

LTM · USA

Leading integration architecture and delivery for enterprise programs spanning Salesforce, SAP S4/HANA, e-commerce, and developer platforms.

API DEVELOPER EXPERIENCE & GOVERNANCE

- Architected a **centralized API catalog** linking API Exchange to a Salesforce Experience Site, with Swagger/OpenAPI docs in a custom LWC, cutting API onboarding time.
- Published the **API Experience Hub** portal with its own subdomain and email services, setting the org-wide API documentation standard.

SAP S4/HANA MIGRATION — MAT PROGRAM

- Delivered the integration layer migrating a strategic accounts platform to **SAP S4/HANA**: TRAX data mapped to a **canonical model** and published via OData and SOAP.
- Deployed all APIs to **Runtime Fabric** with Anypoint Monitoring dashboards for SLA visibility.

E-COMMERCE INTEGRATION — SALESFORCE & HYBRIS

- Built Mule 4 commerce APIs (cart, delivery, promotions, orders) between Salesforce and Hybris for end-to-end **order lifecycle orchestration**.
- Decoupled commerce events with Anypoint MQ and Salesforce Apex callbacks.

PLATFORM ENGINEERING & INNOVATION

- Built **AWS Signature V4** signing for AWS SES, the reusable pattern for all AWS integrations.
- Implemented **Salesforce JWT auth** with RSA key pairs, the enterprise standard for Salesforce.
- Implemented **Kafka streaming for 10 MB+ payloads** in Mule, removing delivery timeouts.
- Automated Flex Gateway deployments via **GitHub Actions** as infrastructure-as-code.
- Built **XML/Java SDK custom connectors** for platform-wide logging.
- Led the **Java 17 migration** across Mule apps, authoring the runbook and coordinating fixes.
- Automated Jira tickets on failed transactions, **reducing MTTR**.
- Built a **Spring Boot / Kafka consumer** for real-time invoice status, persisting to MySQL.
- Architected a **TypeScript / Hono loyalty gateway** fronting Spring Boot services.
- Wired Outlook 365 (Graph API) and AWS SES for business and customer notifications.
- Migrated legacy DataMapper transformations to **DataWeave** for Mule 4.

MULESOFT PLATFORM

- Architected a custom **dynamic client registration** solution integrating MuleSoft with **PingFederate**, automating API client onboarding and identity management.
- Built **Terraform IaC** to deploy and configure APIs on **MuleSoft Omni Gateway**, giving consistent, repeatable deployments across environments.

- Built a **Rust PDK policy** for Flex/Omni Gateway that adds or overrides query parameters on inbound requests, with no backend code changes.
- Published a reusable **Mule tracking connector** to Exchange, writing batch and item records to MySQL in sync (direct insert) or async (Kafka) mode; the standard tracking for several Mule APIs.
- Built a **custom aggregator** replacing Mule Aggregators on CloudHub 2.0 (no in-memory object store): group- and time-based, persisted in MySQL, with a scheduler releasing complete or timed-out groups to Kafka using retries and correlation IDs.

AWS / CLOUD ENGINEERING

- Built **serverless AWS Lambda** jobs for MySQL data processing, status updates and daily email reports.
- Fronted existing Spring Boot services with **Amazon API Gateway** for secure, scalable access.
- Improved **CI/CD and deployment processes** in platform modernization work, speeding releases.
- Managed **IAM roles and permissions** and service-to-service access across AWS workloads.

Senior MuleSoft Developer

Jul 2018 – Apr 2021

Aspire Systems · India

Delivered integration solutions for warranty, insurance, and financial services clients; progressed from developer to technical lead within the engagement.

ENTERPRISE WARRANTY INTEGRATION

- Designed a **contract-first SOAP integration** aggregating dealer product data from Salesforce and pricing from Big Machines, writing contracts back into SFDC with mandatory field validation and custom exception handling.
- Built a **dynamic PDF generation service**: retrieving Salesforce templates, querying Azure DB via optimized stored procedures, generating and merging four distinct PDFs, and persisting all payloads through a logging interceptor for audit compliance.
- Implemented an **asynchronous contract pipeline** using ActiveMQ — acknowledging customers immediately, then processing orders in the background to decouple client-facing latency from backend processing.

FINANCIAL SERVICES INTEGRATION — JPMC

- Built an integration to **JPMC payment web services** for authorization lifecycle management — create, inquiry and delete operations with error handling and security controls.

MuleSoft Developer

Jun 2015 – Jul 2018

Tata Consultancy Services · India

Built foundational integration expertise across retail, mobility, and loyalty programs; pioneered API-led connectivity adoption within the account.

MOBILE COMMERCE PLATFORM

- Implemented a full **API-led Connectivity architecture** (Experience / Process / System layers) routing all mobile app traffic through Mule — one of the earliest API-led implementations in the account, and the reference pattern for later projects.
- Configured Jenkins CI/CD pipelines and Bitbucket repositories, embedding automated build and deployment into the team's delivery workflow.

RETAIL & SUPPLY CHAIN

- Built the Supplier Portal integration: an automated **Hybris-to-AS400** product pipeline via Amazon S3 with Quartz-scheduled Mule pickup, reducing manual supplier data entry.
- Developed the ANT Analytics pipeline — queue-driven S3 extraction, business-rule transformation, and automated delivery to the 11Ants Analytics system.
- Implemented a **Loyalty Program API** integrating Hybris with the Airpoints NZ backend, validating Airpoints numbers and normalizing responses for Hybris consumption.
- Built FTP/SFTP transfer automation with Quartz scheduling for cross-system file exchange, and a Java/JQL Jira tool for dynamic effort reporting.

KEY TECHNICAL ACHIEVEMENTS

- Architected **10MB+ Kafka streaming** in Mule for high-volume data pipelines
- Led **Java 17 migration** across Mule apps with a compatibility assessment playbook
- Delivered **SAP S4/HANA migration** integration on a canonical data model
- Implemented **AWS Sig V4 & Salesforce JWT** — reusable security patterns across the platform
- Reduced **MTTR** with Jira-integrated automated incident creation
- Published the self-service **API Experience Hub** improving developer onboarding
